regular checks are essential for optimal safety and fuel efficiency. Refer to your owner's manual for the recommended tire pressure for your vehicle.

Q2: What are the signs of a failing brake system?

A2: Several signs indicate potential brake issues, including squealing or grinding noises, a spongy brake pedal, the vehicle pulling to one side during braking, or a longer-than-usual braking distance. If you notice any of these, get your brakes inspected immediately by a qualified mechanic.

Q3: How often should I change my engine oil?

A3: The frequency of oil changes depends on your vehicle and driving habits. Consult your owner's manual for the recommended oil change interval. Typically, it's between 3,000 and 7,500 miles, but newer vehicles may have longer intervals.

Q4: What should I do if I experience a flat tire while driving?

A4: If you experience a flat tire, grip the steering wheel firmly, gradually reduce speed, and signal your intention to pull over. Once safely stopped, engage your parking brake, turn on your hazard lights, and assess the situation. If you can safely change the tire yourself, do so. Otherwise, call for roadside assistance.

Q5: How can I improve my fuel efficiency?

A5: Several strategies can improve fuel economy, including maintaining proper tire pressure, avoiding aggressive acceleration and braking, keeping your vehicle properly maintained, and planning your routes to avoid heavy traffic.

Q6: What are some common dashboard warning lights and what do they mean?

A6: Common warning lights include the check engine

light (indicates a problem with the engine), low fuel light (indicates low fuel levels), oil pressure light (indicates low oil pressure), and battery light (indicates a problem with the electrical system). Consult your owner's manual for a complete explanation of your vehicle's warning lights.
